This effect was observed in the following order of dose: C. versicolor 10(4) spores mL-1 > Coriolus versicolor 10(5) spores mL-1 > C. versicolor 10(6) spores mL-1 > Trichoderma viride-8 x 10(6) spores mL-1 > C. versicolor mycelium. A biphasic mode of inhibition is suggested. The inhibition was dependent on the time of inoculation. The mechanism of action of the fungus is discussed.Q: Repetitively checking for touch with Raycast2 I'm new to Unity, I've been attempting to program a simple game where the player taps the screen where a ball will be spawned and move.
